Awarded to: Lead HV (Pty) Ltd and HV Test (Pty) Ltd

Project Name: 27024(5E) Supply, Delivery and Off-Loading of Test Equipment During a 36 Month Period

The original scope of works: This specification details the manufacture, supply, delivery and offloading of various items of test equipment to eThekweni Electricity during the 36-month period ending 30 June 2026.

The cable fault location equipment is utilised by Test Officers at eThekweni Electricity to determine fault positions of various types of failed cables. After the fault positions are determined, repairs are undertaken on these cables. The current transformer (CT) test equipment is used for undertaking tests on CTs for low, medium and high voltage applications.

The overvoltage pressure testing equipment is utilised for testing cables and electrical apparatus. The secondary injection test equipment is utilised for testing protection relays and schemes.

The amended scope includes:

Additional contract value = R16 861 194,57 (excluding VAT)

Reason for the amended scope:

To replace old test equipment, with some being over 15 years in age, and to purchase new equipment for the recently approved four additional Test Officers. There have been several situations where supply could not be timeously restored to areas, where Test Officers have battled to locate faults with old equipment. The original budget was previously reduced and after intensive budget discussions, additional funds have since been approved.

Affected parties must submit representations not later than 14 March 2025, addressed to: The City Manager, 6th Floor, City Engineers Building, 166 K.E. Masinga Road, Durban.
